

Here are the steps my performed in (CMD):

1. Created a folder named "LAB-1\_CLI" using the command: `mkdir LAB-1_CLI`
2. Changed directory to the newly created folder using: `cd LAB-1_CLI`
3. Created a new file named "whoAmI.txt" using the command: `echo > whoAmI.txt`
4. Opened the file using the "notepad" editor, wrote the introduction about yourself, and saved it. `notepad whoAmI.txt`
5. Viewed the content of "whoAmI.txt" using: `type whoAmI.txt`
6. Created a new folder named "DS" using: `mkdir DS`
7. Changed directory to the "DS" folder using: `cd DS`
8. Created a file named "toDelete1.txt" and added content using: `echo hello everyone > toDelete1.txt`
9. Created another file named "toDelete2.txt" using: `echo > toDelet2.txt`
10. Changed back to the parent directory using: `cd ..`
11. Removed the "DS" folder and its contents recursively using: `rmdir /s DS`
